1 CORBIN HARNEY: My name is Corbin Harney. I'm really glad to see the DOE giving you guys the information here. You are the people that's going to have to be living with it. You are the people who are going to have to deal with it one way or the other.

Today we're here together. Maybe tomorrow we won't be here because radiation is taking over the land. We all know that. All of the living things begin to disappear. Like I said before, the native people have survived on this land for thousands of years. The food that we survive from this land has disappeared. All the things that we enjoyed is not here anymore.

You are the people that are going to have to survive on this land just like we did for thousands of years. Think about your children, your grandchildren and so forth. If you don't have no concerns about them, the younger generation, why are we here? If we are concerned about them, let's do something about that.

We have to put our heads together like anybody else to put a stop to this nonsense of our DOE madness, going to be wiping the land, the life off the face of the Earth here. We already see all the water that we drink is disappeared. They're not telling us the truth, but they are bringing things out to us.

It's up to us to think about it, talk about it. Let's not listen to what they've been telling us, because we, most of us can see what took place, what's taking place throughout the country. The plant life is disappearing. The animal life is not here anymore. They're terminated. Look at your fish today and your water. Are they fit to eat? They're not. Those are the things that have taken place.

The berries are not in the hills anymore for the animal life to survive on. Those are the things taking place. We all see that, but somehow we're listening to all the lies that have been put to us. Let's not listen to that. Let's talk about it. Let's get them to understand what our concerns are. Our concern is very serious because we have to be here on this land maybe for another few hundred years. If we don't do something about it together, we are not going to have nothing left for the younger generation.

Think about the younger generation. Those are the things that we are concerned about today. My concern is all the living things on this planet of ours. Today I hope you people would really ask questions and talk about those things. Don't let it be swept under the rug and continuously believe something that's not true. They already have told you how dangerous this radiation is.

2 If the railroad ever have an accident, a truck or whatever, what chance do we have? Right here in Las Vegas for one, if there's a truck accident happens in your intersection, what do you do? They don't have no idea what this is about. But they are making oodles of money off your pocket. Thank you.
